SUBJECT INDEX

Aging, p. 72
Air components, p. 72
Air flow, p. 528
Antioxidants, p. 457
Appliances, pp. 140, 207
Aromatic amine, p. 457
Blowing agents, pp. 72, 207, 238,516
  alternate, p 207
  chemical, p. 304
  hydrofluorocarbon, p. 207
  polyurethane foam, p. 207
  urethane foam, p. 207
  zero ODP, p. 207
Blow-off time, p. 528
Calcium hydroxide, p. 127
Calcium oxide, p. 127
Cell morphology, p. 219
Cell opening, p. 528
Cellular plastic, p. 72
Chain length, p. 557
Compression, p. 264
Creep, p. 264
Critical point drying, p. 127
Crosslinking, p. 304
Demolding properties, p. 318
Diffusion chamber, p. 72
Dimensional stability, p. 72
Elastic properties, p. 31
Energy management, p. 477
Extrusion, p. 516
Flammability, p. 219
Flexible slabstock MDI, p. 159
Flexural properties, p. 587
Flowability, p. 318
Foam, pp. 55, 304, 477, 516, 545
  amide-modified PIR, p. 487
  appliance, p. 207
  CO_2 blown, p. 140
  disc shape, p. 127
  flexible, pp. 55, 330, 457
  flexible polyurethane, pp. 102, 185, 219
  ground, p. 330
  mica-filled polyurethane, p. 587
  microcellular polymeric, p. 127
  modified PIR, p. 487
  open-cell, p. 31
  polyisocyanurate, pp. 238, 487
  polyolefin, p. 264
  polyurethane, pp. 238, 330, 528
  polyurethane rigid molded, p. 318
  rigid, pp. 140, 238
  rigid polyurethane, p. 140
  slab, p. 557
  thermally stable, p. 487
  urethane, p. 207
  water blown rigid, p. 372
  zero ODP, p. 207
Foam insulation, p. 207
Gas diffusion, p. 264
Gas fading, p. 457
Gaseous diffusion coefficient, p. 72
Global warming, p. 140
Glycolysis, p. 477
HCFC, p. 516
HCFC replacement, p. 140
Heat transfer, p. 528
HFC-245fa, p. 238
Hindered phenol, p. 457
Insulation, p. 545
Insulation critical, p. 477
LDPE, p. 304
Liquid HFC blowing agent, p. 11
Magnesium hydroxide, p. 127
Melamine, p. 219
Montreal protocol, p. 238
Morphology, p. 557
NIR/NIR spectroscopy, p. 516
NMR, p. 557
Ozone depletion, pp. 140, 238
Polymeric polyisocyanate, p. 487
Polyol, pp. 372, 457
Polystyrene, p. 516
Polyurethane, pp. 55, 72, 457, 477, 545

SUBJECT INDEX

  ground, p. 330
  mica-filled polyurethane, p. 587
  microcellular polymeric, p. 127
  modified PIR, p. 487
  open-cell, p. 31
  polyisocyanurate, pp. 238, 487
  polyolefin, p. 264
  polyurethane, pp. 238, 330, 528
  polyurethane rigid molded, p. 318
  rigid, pp. 140, 238
  rigid polyurethane, p. 140
  slab, p. 557
  thermally stable, p. 487
  urethane, p. 207
  water blown rigid, p. 372
  zero ODP, p. 207
Foam insulation, p. 207
Gas diffusion, p. 264
Gas fading, p. 457
Gaseous diffusion coefficient, p. 72
Global warming, p. 140
Glycolysis, p. 477
HCFC, p. 516
HCFC replacement, p. 140
Heat transfer, p. 528
HFC-245fa, p. 238
Hindered phenol, p. 457
Insulation, p. 545
Insulation critical, p. 477
LDPE, p. 304
Liquid HFC blowing agent, p. 11
Magnesium hydroxide, p. 127
Melamine, p. 219
Montreal protocol, p. 238
Morphology, p. 557
NIR/NIR spectroscopy, p. 516
NMR, p. 557
Ozone depletion, pp. 140, 238
Polymeric polyisocyanate, p. 487
Polyol, pp. 372, 457
Polystyrene, p. 516
Polyurethane, pp. 55, 72, 457, 477, 545

Polyurethane recycling, p. 477
PURRC, p. 330
Reaction kinetics, p. 304
Recycling, pp. 330, 477
Rheology, p. 528
Scorch inhibitors, p. 457
Silicone, p. 55
Silicone surfactant, p. 528
Skin layer, p. 528
Slabstock, pp. 55, 102
Surfactant, p. 55
Thermal conductivity, p. 545
Thermal radiation, p. 545
Vacuum, p. 545
Vacuum panel, 545
Viscoelasticity, p. 264
Voronoi tessellation, p. 31
Zero ODP, p. 72
